

AHMAD SULTAN

Full-Stack Odoo & Python Developer

Damascus, Syria (open to relocation) | +963 931 458 128 | eng.ahmd.sltn@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Full-stack Odoo and Python developer with 3+ years delivering ERP, SaaS, and fintech platforms across Accounting, POS, Sales, Inventory, and multi-company deployments. Delivered and contributed to 15+ Odoo/Python projects, spanning operational ERP automation, multi-tenant SaaS provisioning, regulated POS systems, and government e-invoicing compliance integrations. Architected a full REST API framework, JWT/OTP authentication, and a configurable KYC system for a production fintech e-wallet platform, treating security as a core part of system design rather than an afterthought. Comfortable owning backend architecture end-to-end: ORM design, transactional integrity, third-party payment and hardware integrations, and performance optimization. Works closely with cross-functional teams day to day — gathering requirements directly with clients, handing off clean API contracts to frontend and mobile developers, reviewing code, and mentoring junior and trainee developers. EU relocation-ready, with a B.Eng. in Computer and Automation Engineering and a track record of leading remediation projects as part of a team.

CORE SKILLS

Odoo & ERP: Module development, ORM, QWeb, OWL.js, server & scheduled actions, multi-company/multi-tenant architecture, Accounting, POS, Sales, Inventory, CRM, HR, Survey, eCommerce, Odoo 14–19

Backend & APIs: Python, REST API architecture, JWT/OTP authentication, Flask, FastAPI, Django, PostgreSQL, MongoDB, SQL, Swagger/OpenAPI documentation

Frontend & Mobile: JavaScript, OWL.js, HTML/CSS, React.js, Flutter (Provider, Firebase, custom packages, biometric auth)

Security & Compliance: Secure authentication design (JWT/OTP/KYC), role-based & multi-tenant access control, government e-invoicing/tax-API compliance, audit-trail & forensic logging, PortSwigger Web Security Academy labs (API & backend security)

DevOps & Tools: Git/GitHub/GitLab, Docker, Postman, CI-friendly workflows

Linux & Systems: Ubuntu/Debian server administration, Bash scripting, systemd services, cron scheduling, file permissions & user management, SSH

Collaboration & Leadership: Client-facing requirements gathering, technical mentorship of junior/trainee developers, cross-team API contract design, vendor & hardware-manufacturer technical liaison, formal technical writing (audit reports, documentation), code review

EXPERIENCE

Full-Stack Odoo Developer | Apollo Group (Solution) — Damascus, Syria

Feb 2026 – Present

- Conducted an independent security and code-quality audit of a production fintech e-wallet platform, identifying critical architectural and API-layer risks, then presented the findings and led the engineering team through the remediation.
- Built a full REST API framework on Odoo's HTTP layer, including an API registry, decorator-based endpoint grouping, and transaction-safe controllers with full rollback on validation failure.
- Designed JWT-based authentication and a reusable OTP framework for phone-number login and one-time password verification.
- Developed a template-driven KYC verification framework with configurable workflows, document templates, and approval processes.
- Integrated Swagger for live, permission-gated API documentation, so other teams and integrators could self-serve endpoint details.
- Extended ownership into Accounting (journal entries, chart of accounts, payment providers) and upgraded the platform from Odoo 18 to 19.

Full-Stack Odoo & Flutter Developer | EBTECH Technologies — Dubai, UAE (Remote)

May 2023 – Jan 2026

Employment Verification: Signed EBTECH Technologies experience letter — [view document](#)

- Contributed to 12+ ERP and mobile application projects across Accounting, POS, Sales, Inventory, Website, Portal, and Survey modules as part of the development team.
- Built scalable backend solutions in Python/Odoo ORM implementing business workflows and automation for 500+ users.
- Developed REST APIs integrating payment gateways, SMS providers, and external business systems.
- Designed Flutter mobile applications integrated with Odoo backend services via REST APIs.
- Implemented multi-company ERP solutions with custom websites, user management, and role-based access control.

- Reviewed teammates' code, mentored junior developers day-to-day, and led technical design discussions across the SDLC.
- Worked directly with clients during requirements gathering and issue triage, translating business needs into specs the team could build from.

Odoo & Flutter Developer (Academic Project) | Damascus University — Damascus, Syria

May 2024 — Sep 2024

- Partnered with one teammate on a Healthcare Management System combining Odoo, Flutter, and Ethereum blockchain for secure medical record verification — independently owned the Odoo backend and API layer while co-developing the blockchain integration; teammate led the Flutter client on top of the API contract we designed together.
- Achieved 93% — highest grade in class.

SELECTED PROJECTS

All projects below were delivered as part of a team. Each entry states my role and lists only the work I was personally responsible for.

Fintech E-Wallet — Security Audit & Architectural Remediation — Odoo 18 → 19 · Role: independent auditor, then remediation lead

Audited a live fintech e-wallet platform independently, documented critical security and architecture risks, then led the engineering team through remediation — personally architecting the REST API layer, authentication system, and KYC engine.

Krooz.ai — Multi-Tenant Talent Assessment SaaS — Odoo 17, GCC region · Role: backend developer on the delivery team

Part of the EBTECH team that delivered Krooz.ai. Built the CRM-to-provisioning pipeline that automatically creates a new company, admin user, website, and subdomain (via the Cloudflare API) for each new client, with full multi-tenant data isolation.

Syrian Tax Authority — E-Invoicing & Compliance Integration — Odoo 17, 18 · Role: backend developer on the integration team

Part of the EBTECH team responsible for this integration. Built the real-time connection between Odoo Accounting and a government tax authority's e-invoicing API, generating compliance QR codes on customer invoices — directly transferable to EU e-invoicing mandates such as Germany's XRechnung/ZUGFeRD and Poland's KSeF.

OCA Audit Log — Open-Source Security Extension — Odoo 16–19 · Role: backend developer on the compliance/audit tooling team at EBTECH

Personal contribution to the public OCA community audit_log module — added report/file download tracking, IP-level logging, and Pivot/Kanban audit views. Verifiable on GitHub.

RFID POS Solution — Hardware-integrated POS · Role: backend developer + mentor, two-person team

Worked this as a two-person engagement: owned the Odoo backend — integrating an RFID hardware SDK and building inventory reconciliation and automated delivery-order logic — while mentoring a trainee developer through the app-side build.

Fleet Data Automation — No public vendor API · Role: backend developer on the automation team

Part of the EBTECH team solving fleet invoicing. Built the resilient data-collection layer against a third-party transport platform lacking public API access, to automatically pull trip, toll, and violation data for client invoicing.

EDUCATION

B.Eng. in Computer and Automation Engineering — Damascus University, Syria (2019 – 2025)

Key project: Healthcare Management System (Odoo + Flutter + Ethereum blockchain), built with one teammate — independently owned the Odoo backend, 93% — top of class.
